aviation & automotive technology

Our German programme offers the opportunity to explore engineering and manufacturing through two of Germany's most famous brands: Volkswagen and Airbus.

what will students do?

Students will have the opportunity to spend a whole day exploring the Volkswagen attraction Autostadt. A feat of engineering in its own right, this park offers exhibitions, tours and even an adventure track to put driving skills to the test.

At the Airbus factory, students will see a presentation and have a guided tour of the site.

Students will also be involved in workshops at Berlin's twin museums of science and technology.

what will students learn?

Students will be able to study scientific principles through practical applications. They will explore how technology has changed over the past century and learn about the latest advances in aviation and automotive technology.

educational highlights

- Guided tour of the Volkswagen & Airbus factories.
- Hands on workshop in the science museum.

cultural highlights

- Shopping at Ka De We, second largest shopping store in Europe and Germany's answer to Harrods.
- City Tour of Berlin by road & river taking in sights including the Brandenburg Gate, Berlin Television Tower and "Zeughaus"

what is included in the package?

- Airport transfer
- Accommodation (various standards available)
- All internal transport
- All entrance fees for listed attractions and activities
- Food

Tours, itineraries and advertised attractions may vary depending on availability, time of booking and age group of students. Before any legally binding contract is entered into, an exact programme of tours, prices and what's included will be agreed with the client.
